A BOOK THAT DEEPLY ALTERS OUR PERCEPTION OF WHAT IT IS TO BE HUMAN; WHAT ARE WE? WHERE ARE WE? WHAT'S REAL?

A virtual reality ran by a Networked Intelligence where DNA acts as a quantum computer

THE SPIRITUAL GENOME; *Networked Intelligence in DNA*

"A make believe world composed of pseudo-physical robots, none of which have the slightest reason to doubt that they are not in fact what they appear to be. At least they had no real reason to doubt their own reality until Quantum Mechanics came along, and that is why Quantum Mechanics is, or at least should be, shocking! All that they see, and smell, and touch, and hear and taste are brought about by waves from the substratum."

Bradley Bartholomew

Quantum physics has drastically changed our view of ourselves and the world around. Gradually such concepts about the holographic and virtual nature of reality are making its way into collective thinking. Through technology, films and even video games we are being presented with these thought provoking possibilities. Bradley Bartholomew's new book *The Spiritual Genome; Networked Intelligence in DNA*; stretches the fabric of such concepts perhaps taking our minds further than we could have ever imagined. The author blends together, science, spirituality, philosophy and history piloting us into an evolutionary age.

Bradley Bartholomew started writing this book in the mid-1980s - almost 30 years ago. He started reading the works of Sigmund Freud and became so fascinated that he ended up twice reading Freud's complete works (3 million words). He then had an epiphany - a profound realization that Freud's unconscious mind and the Inner Self are one and the same. At that stage he had only a profound 'feeling' that the Inner Self of all sentient beings was somehow connected at the base of the brain which enabled us all to see an illusory external world.

This book examines theories that within the networked intelligence in the DNA, there are memristors in the DNA that enable the storing and processing of data and that the DNA acts as an optical quantum computer which transmits its instructions to the brain/body by means of biophotons.

The author writes using scientific references and formulas here and there yet keeps the reader driven to understand every word and to discover more of what is being presented. It is a fascinating look at reality, our place in it and where we are heading as a species.

Bradley Bartholomew; is a Lawyer, researcher, writer and a long time student of Hinduism. He has written such articles as *The Matrix truer than you think* and *Are we Living in a computer Simulation*.

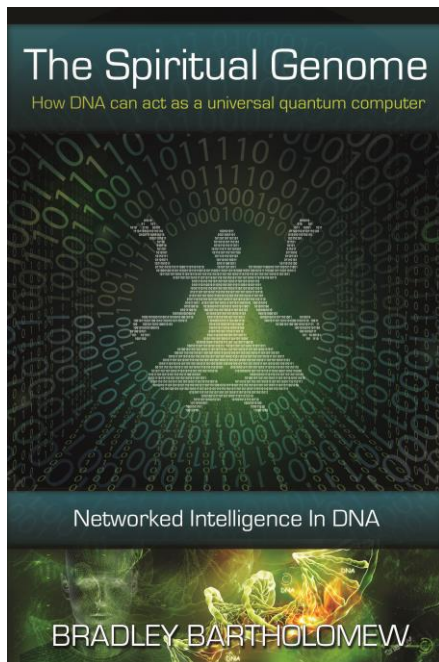

220 pages • ISBN 978-0-9913457-2-4 • Paperback \$18.95 • **On Sale Date: June 25, 2014**

Ebook ISBN 978-0-9913457-5-5 • Ebook \$11.99

Bradley Bartholomew weaves together science, spirituality and philosophy in his examination of the “Networked Intelligence In DNA”

Bradley Bartholomew’s work is timely in response to questions being raised by the scientific community and others; “are we living in a computer simulation? Does the matrix really exist?” Spiritual Genome is a cohesive blend of science and spirituality with Hinduism at its roots; shedding light on the networked intelligence in DNA and how DNA can act as a universal quantum computer. Through this body of work the “matrix” unfolds!

Bradley Bartholomew’s book *The Spiritual Genome* brings to the forefront the theory of a networked intelligence in the DNA. He clearly outlines this theory that the DNA of all living creatures (including plants) is connected in the quantum substratum, and that it is this networked intelligence which constitutes the essential oneness from which springs all the diversity of life that we see around us. Bradley Bartholomew’s book illustrates how this networked intelligence is generated at the fundamental level by computer processing constituting the ultimate source of life. This he says is demonstrated by *memristors* in the DNA which enable the storing of data, and which have a direct bearing on

such widely believed phenomena as *past lives* and *reincarnation*. The Author cohesively explains how the DNA can act as a universal quantum computer with sufficient processing power to potentially enable the generation of the entire universe.

The Spiritual Genome explores how DNA acting as a universal quantum computer is foreshadowed in the Hindu Upanishads written more than 2500 years ago. The Upanishads are interpreted using state of the art neuroscience as well as Quantum Mechanics. This is said to not only enable the precise location of the Inner Self, but also

demonstrates that what we experience through our five senses is capable of being generated from within. Quantum Mechanics also enables a deeper interpretation of Maya; the ancient Hindu doctrine of the illusory nature of all things. In the words of Bradley Bartholomew the Author, "We find that all this *diversity* that we see around us is in fact a virtual reality nested in the networked intelligence."

Bradley Bartholomew

Bradley Bartholomew initially trained as a lawyer in Queensland, Australia. He subsequently came across the works of Sigmund Freud and experienced a

profound realization that Freud's Unconscious Mind and the Hindu Inner Self were one and the same. From then on he has devoted his life to tracking the Inner Self. After spending considerable time in an Ashram in India he wrote several articles about Hindu Philosophy in the 1990s that were published in prestigious

philosophical journals in India including the Indian Philosophical Quarterly. His revelations that the Hindu Upanishads have a Quantum Mechanical interpretation led him back to University to formally study Physics and Genetics where he made a pivotal discovery about how the DNA acts as a Quantum Computer. This discovery has brought Hinduism into the information age.

Shorter Bio

Bradley Bartholomew wrote several articles about Hindu Philosophy in the 1990s that were published in prestigious philosophical journals in India including the Indian Philosophical Quarterly. He turned to the study of Physics and has made some startling discoveries about the capacity of the DNA to store data as well as the operation of the DNA as an optical quantum computer. These discoveries seem to confirm the Hindu Philosophy that he was writing about previously.

Questions for Bradley Bartholomew

- What is the networked intelligence?
- What is morphogenic resonance?
- Does DNA have the capacity to store memory?
- Are past lives simply stored memory?
- Are we living in a computer simulation?"
- How does DNA act as a quantum computer?
- What does Hinduism have to do with networked intelligence theory?
- What does neuroscience tell us about the location of the Inner Self?
- How can the five senses be activated from within the body?
- What does Quantum Mechanics and Hinduism have to say about the nature of life?

Additional Topics/Articles written

- Biocentrism begins and ends with DNA
- Are we living in a computer simulation
- The Matrix Truer than you think

- Beam me up Scottie
- The Matrix: Truer than you think

Videos

- Biophotons
- DNA as a quantum computer
- Memristors
- Morphogenic Resonance
- Networked Intelligence

Book Specifications

AUTHOR: Bradley Bartholomew

TITLE: THE SPIRITUAL GENOME; *Networked Intelligence in DNA*

DATE PUBLISHED: June 25, 2014

ISBN # 978-0-9913457-2-4

PUBLISHER: Timeline Publishing Inc.,

PUBLISHER WEBSITE: www.timelinepublishinginc.com

STATE: California **CITY:** North Hollywood
